BIOLOGY	Candidate session number		
HIGHER LEVEL PAPER 2	0 0		
Friday 16 November 2012 (afternoon)	Examination code		
2 hours 15 minutes	8 8 1 2 - 6 0 0 2		

# INSTRUCTIONS TO CANDIDATES

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Section A: answer all questions.
- Section B: answer two questions.
- Write your answers in the boxes provided.
- A calculator is required for this paper.
- The maximum mark for this examination paper is [72 marks].

# **SECTION A**

Answer all questions. Write your answers in the boxes provided.

1. Cells in the alveolus wall produce a surfactant. Its function is to prevent alveoli collapse at the end of expiration. Surfactants are used in the treatment of respiratory system disease in premature babies.

The table shows some of the components of different surfactant preparations.

	Percentage composition by mass			
Component	Synthetic surfactant A	Synthetic surfactant B	Natural human surfactant	Modified human surfactant
Phospholipids	99	84	81	100
Cholesterol	0	not stated	5 to 10	0
Fatty acids	tty acids <0.5 6		1.5	0
Proteins	1	0.5 to 1	5 to 10	0

[Source: adapted from P Rauprich, et al., (2000), Clinical and Diagnostic Laboratory Immunology, 7(5), pages 817-822]

(a) State the surfactant that contains the least amount of phospholipids.

(b) Compare the composition of natural human surfactant with synthetic surfactants.

[2]

[1]

(Question 1 continued)

ĩ

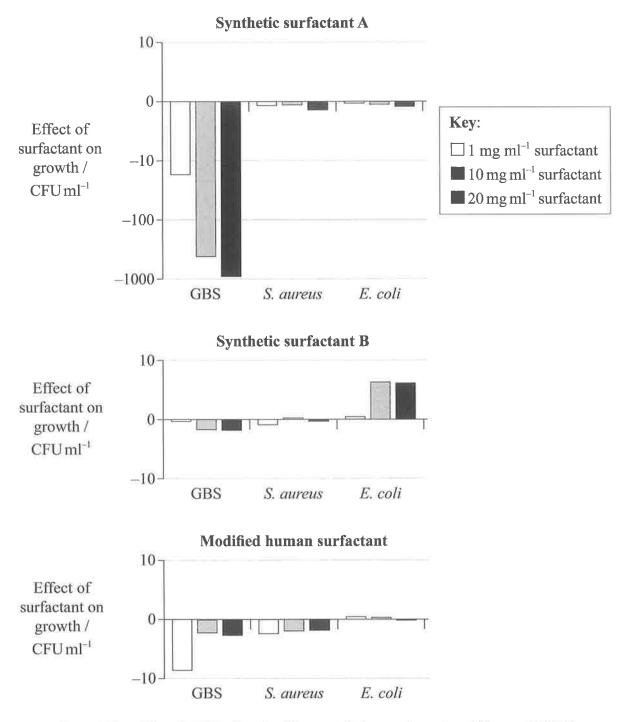

(c) Phospholipids found in the surfactants form a surface film on the moist lining of the alveoli. Outline how the hydrophilic and hydrophobic parts of the phospholipids in the surfactants are aligned on the alveolar surface. [1]

-3-

The effect of three different surfactants on the growth of three types of bacteria was assessed. Group B streptococci (GBS), *Staphylococcus aureus*, and *Escherichia coli* were incubated with three different concentrations of surfactant (1, 10 and 20 mg ml<sup>-1</sup>).

The bar charts show whether each concentration of surfactant increased or decreased bacterial growth, compared with the growth without surfactant. The difference in growth is shown as colony forming units (CFU) per millilitre.

[Source: P Rauprich, et al., (2000), Clinical and Diagnostic Laboratory Immunology, 7(5), pages 817-822]

(Question 1 continued)

(d) Identify the effect of increasing the concentration of synthetic surfactant A on the growth of GBS. [1]

- 5 -

(e) Compare the effect of the three surfactants, synthetic surfactants A and B and the modified human surfactant, on the growth of the different bacteria at a concentration of  $20 \text{ mg ml}^{-1}$ .

(f) Using all the data provided, evaluate the hypothesis that the presence of proteins in surfactants can decrease bacterial growth.

[3]

[3]

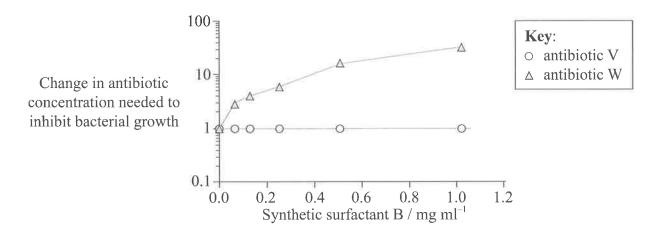

[2]

[2]

#### (Question 1 continued)

The effect of synthetic surfactant B on the activities of two different antibiotics used against *S. aureus* was studied. The minimum amount of antibiotic required to inhibit bacterial growth is given a value of 1. The graph shows the factor by which this dose of antibiotic needs to be multiplied by to have the same inhibitory effect on growth as surfactant concentration increases.

[Source: M H Gotfried, et al., (2008), Antimicrobial Agents and Chemotherapy, 52(1), pages 92–97]

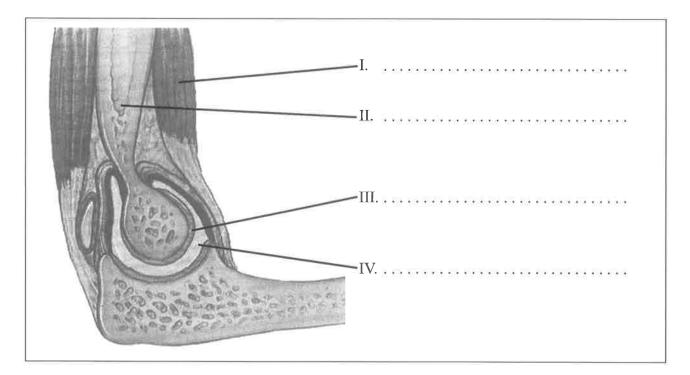

(g) Distinguish between the effect of the synthetic surfactant B on the two antibiotics.

(h) Using all the data provided, evaluate the evidence for the use of antibiotic V in the prevention of bacterial infections in premature babies that are being treated with synthetic surfactant B.

[2]

# 2. (a) Label I, II, III and IV on the diagram of the human elbow.

-7-

[Source: E N Marieb and R Lachaîne, (2005), Anatomie et physiologie humaines, Troisième édition, ERP1, page 276]

[1]

- 3. The greenhouse effect is a naturally occurring process.
  - (a) (i) State one greenhouse gas.

(ii) Explain how radiation of different wavelengths is involved in the greenhouse effect. [2]

and the second second

# (Question 3 continued)

(b) The enhanced greenhouse effect can cause a rise in atmospheric temperature.

-9-

(i) Outline **two** consequences of a global temperature rise on arctic ecosystems. [2]

(ii) Outline one effect of a temperature rise on plants.

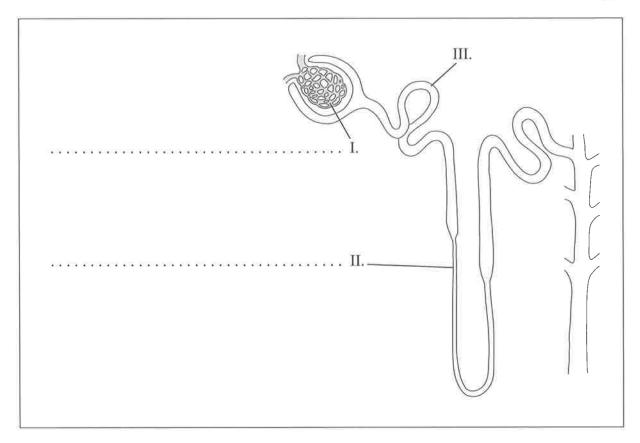

[1]

1

[1]

- 4. The diagram shows the structure of a nephron.
  - (a) (i) Label I and II.

(ii) Outline the function of III.

(This question continues on the following page)

[1]

# (Question 4 continued)

l

(b) Estimate the content of glomerular filtrate and urine of a healthy person by completing the following table.

- 11 -

[2]

	Plasma proteins / mg 100 ml <sup>-1</sup>	Glucose / mg 100 ml <sup>-1</sup>	Urea / mg 100 ml <sup>-1</sup>
Blood plasma in renal artery	740	90	30
Glomerular filtrate		90	
Urine			

(c) Explain the role of the medulla and the collecting duct of the kidney in the maintenance of the water balance in blood. [3]

l

# **SECTION B**

- 12 -

		<b>vo</b> questions. Up to two additional marks are available for the construction of your answ answers in the boxes provided.	vers.
5.	(a)	Distinguish between autosomes and sex chromosomes in humans.	[4]
	(b)	Describe the inheritance of hemophilia including an example using a Punnett grid.	[6]
	(c)	Explain how meiosis results in an effectively infinite genetic variety of gametes.	[8]
6.	(a)	State the role of <b>four named</b> minerals needed by living organisms.	[4]
	(b)	Explain the processes by which minerals are absorbed from the soil into the roots.	[8]
	(c)	In anaerobic conditions, plants release energy by glycolysis. Outline the process of glycolysis.	[6]
-			5 47
7.	(a)	Draw a labelled diagram of the ultrastructure of a prokaryote.	[4]
	(b)	Explain the process of DNA replication.	[8]
	(c)	Outline how the structure of the ribosome is related to its function in translation.	[6]
8.	(a)	Describe the process of fertilization in humans.	[6]
	(b)	Explain how the structure and function of the placenta helps to maintain pregnancy.	[8]
	(c)	Outline the hormonal control of the process of birth.	[4]
